Digital Library Information Management System (DLIMS)

DLIMS is a web-application for "Library Automation" that provides the facility to control all the Library tasks in a real-time and online environment. It is a web-based service, so nothing is to be installed, and no servers are required in the libraries. It offers many flexible and convenient features, allowing librarians and library users to maximize time and efficiency by providing all information of students, staff, and books under one umbrella.

Key Benefits

Acquisition Record Management	Member Login Management
Accession Record Management	Unique identification of members
Member Record Management	RFID/Biometric support
Suppliers Record Management	Bar code and QR code support
Issue/Return Record Management	Complete Documentation & FAQ's
Entry/Exit Record Management	Guest management

Salient Features

All future up-gradations are free to the end users	Minimum operator requisite
Cloud-based backups and general system maintenance	Data validation at each step
	Artificially Intelligent System
Customizable for general purpose requirement	Fidelity for rules and regulation
System transparency, flexibility & user friendliness	Complete documentation of literature
Different modules are designed and combined under a single application	Increase usage of the available resources
No special supplements are required to run this web application	A fully tracked system minimized forgery
Right Information at the Right Place and at the Right Time	Provides complete updated information to the Patrons
	No interface and conflicts among authorities
